

Assessing Against Learning Outcomes, Module 3

3.0 Module Introduction

In module 3, we will conduct an assessment validation of an assessment task using the Assessment Validation Template we explored in module 2.

You'll recall from module 2 that there are three essential components to the Assessment Validation process. Firstly, the assessment task or test, secondly the corresponding Learning Outcomes from the course and finally, the assessment validation tool such as the NEAS Assessment Validation Template.

In this module, we will use a Reading Assessment Task which we have selected from a popular course book. We've chosen this task as it represents the sort of tasks that are commonly used by teachers and assessors in ELT centres. The learning outcomes we are using are a set that we wrote ourselves and are based on the CEFR.
